

Cuperdem

ACTION:

CUPERDEM is an organic copper, designed for foliar and drip irrigation application. Because of the easy penetration and high systemic action, it spreads throughout the plant.

CUPERDEM cannot be diluted by rainfall. With that in mind, apply only approx. 10% amount of the active ingredients (Cu), compared to other conventional cupric products. This decreases the application of the copper to the environment by 90%.

WHY IS CUPERDEM DIFFERENT:

CUPERDEM's unique Heptagluconate formulation assist the plant in producing Phyto Alexins, which in turn assist the plant further to combat disease and stress situations naturally.

HOW DOES CUPERDEM HELP CROPS:

Among different effects and agronomics benefits, the highlight is the action in the enzymatic processes and photosynthesis, giving the plant more resistance against diseases such as: Mildew, Anthracnose, Alternaria, Pitium, Monilia, Phytophthora and Fusarium.

COMPOSITION:

Copper (Cu) water soluble 6% w/w

DOSE AND TIME OF APPLICATION:

Foliar:

Vineyards: 200-300 ml/hl of water during the growing cycle regarding the weather conditions.

Vegetables: 200-400 ml/hl of water, regarding the weather conditions and crop stage.

Olive: 200-300 ml/hl of water in the spring, fruit development and autumn.

Citrus: 150-200 ml/hl of water during the autumn.

Turf: 200-400 ml/hl of water, according to weather conditions.

Soil application:

In most crops the 3 -5 L/ha

TIME AND NUMBER OF TREATMENTS:

Depending on weather conditions, make the necessary applications considered needed.

CROPS:

Prepared for most crops.

Available in packs of: 1 L, 5 L and 20 L.

Reg no: B5359 of Act 36 of 1947
