

ENERMAX

ACTION:

ENERMAX is a fertilizer formulated to enhance and standardize the size of the fruits, promotes cell division and stimulates the synthesis of new proteins, influencing the distribution of assimilates selectively through the translocation of nutrients from leaves, stem and root to the fruit.

The simultaneous application of all biochemical factors and nutrients, as well as its immediate absorption, meet the higher energy needs that characterize the development of the plants, avoiding situations of stress and / or deformation of the fruit.

COMPOSITION:

Phosphorous (P)	87g/kg
Potassium (K)	283g/kg
Iron*(Fe)	6,0g/kg
Boron (B)	0,4g/kg
Manganese*(Mn)	2,0g/kg
Molybdenum (Mo)	0,25g/kg

*EDTA Chelated

APPLICATION PROCEDURE:

FRUITCROPS

Foliar Application:

Apple and pear:

First application-3 weeks after the fall of the petals (fruit with 8-12mm), 100g / 100L of water. Second and third application, if necessary, 40 days and 20 days before harvest at 75 g/100L of water.

On peach/nectarine/apricot perform the first application when the fruit has 20-30 mm in diameter, it may take 2 to 3 applications per cycle of 80-100g/100L of water, depending on the vigour of the plant and climatology.

On cherry it's recommended two applications 30 and 15 days before harvest at 100g/100 L of water. To improve the plant response is recommended to mix with FORALG.

Citrus: Apply 100g per 100L of water by the end of physiological drop in clementine the recommended diameter of the fruit to apply is approximately 10-15 mm and 25-30 mm in orange.

Vegetables: 50-100g per 100 L of water

ROOT APPLICATION:

Vegetables -100-200g/1000m² performing applications every 10-15 days as is necessary.

In tomatoes, peppers, cucumbers, squash, watermelon and cantaloupe should be applied with the appearance of first flowers, performing various applications with intervals of 10-15 days.

In Strawberry should be applied when the fruit is between the white and pink color, making several applications every 2 weeks, coinciding with a high percentage of fruit development.

Available packaging: 0,1Kg, 1Kg and 5Kg.
