

## Extruded Roof-Tile Making Machine

### RSM-X

The Revaro RSM-X Extrusion Cement Roof Tile Machine can produce different types of roof tiles, but double Roman style is the most popular. The machine comes standard with mixer and conveyor and produces tiles from river sand and cement. It is the most economical machine in our range and produces roof tiles on economical pallets. You can start producing 500 tiles per day and by adding pallets and drying racks can do up to 8000 tiles in 2 shifts. The machine also comes with moulds to produce all the parts needed to install a roof.

### Specs

| Product            |                      |
|--------------------|----------------------|
| Cycle Time         | 3-5Pcs / min         |
| Anual Production   | 360,000 - 600,000Pcs |
| Product Dimensions | 420 x 330mm          |
| Machine Specs      |                      |
| Method             | Extrusion            |
| Voltage            | 380V                 |
| Power              | 18kW                 |
| Materials          | Rolled Steel         |
| Production Team    | 4 Min Team Required  |
| Surface Colour     | Optional             |
| Gross Weight       | 12000kg              |
| Cube Type          | 20GP/Set             |
